

What is claimed is:

1. A prefabricated housing structure comprising:

a first plurality of wall panels;

a second plurality of wall panels;

first connection means disposed connecting a selected one of said first plurality of wall panels to a selected one of said second plurality of wall panels;

second connection means disposed connecting a selected one of said first plurality of wall panels to another selected one of said first plurality of wall panels; and

third connection means disposed connecting a selected one of said second plurality of wall panels to another selected one of said second plurality of wall panels.

2. The prefabricated housing structure as claimed in Claim 1 wherein said first plurality of wall panels combines a generally rectangular member having a first and a second relatively shorter edge and a first and a second relatively longer edge.

3. The prefabricated housing structure as claimed in Claim 2 wherein said first of said relatively shorter edges on said first plurality of wall panels comprises:

connecting means for connecting to said relatively shorter edges of said second plurality of wall panels and in which said first of said relatively shorter edges on said second plurality of wall panels comprises

connecting means for connecting to said relatively shorter edges of said first plurality of wall panels.

4. The prefabricated housing structure as claimed in Claim 1 wherein said connecting means comprises:

first projecting portions disposed projecting from each of said first plurality of wall panels, and

second projecting portions disposed projecting from each of said second plurality of wall panels.

5. The prefabricated housing structure as claimed in Claim 1 wherein said connecting means comprises interconnecting means

6. The prefabricated housing structure as claimed in Claim 1 wherein said connecting means comprises interdigitating means.

7. The prefabricated housing structure as claimed in Claim 1 wherein said connecting means comprises interlocking means.

8. The prefabricated housing structure as claimed in Claim 1 wherein each of said pluralities of wall panels comprises a generally planar member.

9. The prefabricated housing structure as claimed in Claim 1 wherein each of said pluralities of wall panels is generally planar and wherein said connecting means is capable of withstanding forces in a direction generally parallel to said pluralities of wall panels.

10. The prefabricated housing structure as claimed in Claim 9 wherein said connecting means is capable of withstanding forces in a direction generally perpendicular to said pluralities of wall panels.

11. The prefabricated housing structure as claimed in Claim 1 wherein each of said pluralities of wall panels comprises a hollow wall panel.

12. The prefabricated housing structure as claimed in Claim 1 wherein each of said pluralities of wall panels comprises a plastic panel.

13. The prefabricated housing structure as claimed in Claim 1 wherein each of said pluralities of wall panels comprises a relatively shorter straight edge.

14. The prefabricated housing structure as claimed in Claim 1 further comprising a first plurality of channel members and a second plurality of channel members.

15. The prefabricated housing structure as claimed in Claim 14 said relatively shorter straight edges of said first plurality of wall panels are disposed received in said first plurality of channel members.

16. The prefabricated housing structure as claimed in Claim 14, said relatively shorter straight edges of said second plurality of wall panels are disposed received in said second plurality of channel members.

17. The prefabricated housing structure as claimed in Claim 1 further comprising a plurality of roof panels.

18. The prefabricated housing structure as claimed in Claim 1 further comprising a door panel and channel means disposed accepting said door panel in a sliding relationship relative to said wall panels.
